SUMMARY

Early-career Data Scientist with hands-on experience applying machine learning, NLP, causal inference, and statistical modeling to real-world, data-heavy problems. Experienced in owning end-to-end analysis, working with ambiguous datasets, and translating business and product questions into reproducible, actionable insights across Python, SQL, and R.

TECHNICAL SKILLS

Languages & Tools: Python (pandas, scikit-learn, transformers, numpy), SQL, R (tidyverse, ggplot2, RShiny), MS Excel

Machine Learning & Analytics: NLP, text classification, SpaCy, clustering, forecasting, A/B testing, regression

Causal Inference: Difference-in-differences, synthetic control, propensity score matching

Data Practices: Dashboarding (RShiny, PowerBI, Looker, Tableau), version control (git), web scraping

EXPERIENCE

University of Oslo — *Data Science Contractor* (Remote, part-time) **Feb 2025 – Dec 2025**

- Built and deployed NLP pipelines in Python to analyze 3,000+ open-ended survey responses across 3 languages, reducing manual coding time by ~90%.
- Developed supervised text classification models using local LLMs in R, achieving 0.93 macro F1 and accelerating insight delivery from days to hours.
- Designed statistical models and visualizations supporting product-adjacent research on public opinion and technology adoption.
- Tested 10+ hypotheses using multinomial logit models to surface demographic and behavioral patterns.

Statistical Horizons — *External Data Consultant* (Remote, part-time) **Oct 2024 – Aug 2025**

- Transformed fragmented customer and marketing data into interactive RShiny dashboards used by leadership to guide product and pricing decisions.
- Designed AI-focused analytics curriculum aligned with market demand, contributing to **5 new course offerings**.
- Sourced and analyzed social media and audience data to identify high-value podcast partnerships, improving marketing reach and targeting.

Leipzig University — *Lecturer for Computational Methods* (hybrid, part-time) **Oct 2021 – Dec 2025**

- Led 40+ applied data projects in Python and R involving web scraping, NLP, OCR, and unstructured data analysis.
- Guided teams through end-to-end analytics workflows, emphasizing clean data pipelines and reproducibility.

Linköping University — *Graduate Research Assistant* **Feb 2020 – Jun 2021**

- Engineered ML-based text classification pipelines analyzing 40,000+ documents to identify large-scale behavioral patterns.
 - Built scalable scraping infrastructure extracting 80M+ records, supporting downstream analytics and model training.
 - Contributed statistical analysis to peer-reviewed publications through collaborative, cross-functional research teams.
-

EDUCATION

Ph.D. in Computational Sociology — *Ecole Polytechnique, France* **Expected Mar 2026**

- Applied machine learning and causal inference to large-scale behavioral, survey, and text data.

M.Sc. in Computational Social Science — *Linköping University, Sweden* **2019 – 2021**

- Course highlights: experimental design, causal inference, statistical modeling, discrete choice analysis.

B.A. in Political Science — *University of Regensburg, Germany* **2014 – 2019**

- Course highlights: survey methodology, qualitative research design, statistical modeling.
-

ADDITIONAL

- Work Authorization:** U.S. work permit, no visa sponsorship required; EU work permit (German citizen)
 - Experience Level:** Early Career (1-3 years industry-equivalent)
-
